Number Talks

in the Primary Classroom

By Kathy Richardson and Sue Dolphin

Number Talks are an interactive activity and any planning must be in response to what the children in that classroom do each day. This book does not give teachers a recipe for doing Number Talks—it provides the information teachers need to make the most of the Number Talks experience each day.

Number Talks in the Primary Classroom identifies the mathematics that children must learn, describes the stages that children naturally move through on their way to proficiency and shows teachers how to use models, questions and experiences to support children's development of mathematical understanding.

This book comes out of the authors' combined experiences doing Number Talks for more than 30 years.
